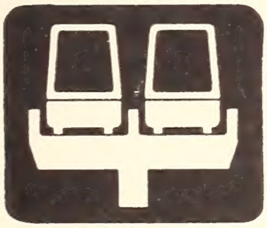
National Urban Mass Transportation Statistics

1989 Section 15 Annual Report

Prepared by:
COMSIS Corporation

Transit Financial and Operating Data
Reported for Fiscal Years Ending
Between January 1, 1989 and
December 31, 1989



Audit Review and Analysis Division
Office of Capital and Formula Assistance

CAUTION: Extensive efforts have been made to assure the quality of information contained in this report. It is impossible, however, to achieve complete accuracy and consistency of the reported data. In addition, the reported data do not include all relevant information generally necessary to explain apparent differences in performance (e.g., information related to work rules, topography, climate, and unusual events such as strikes and service start-ups). Users of this report, therefore, should be careful not to draw unwarranted conclusions based solely on the data contained herein.

16. Abstract

This report summarizes the financial and operating data submitted to the Urban Mass Transportation Administration (UMTA) by the nation's public transit operators, pursuant to Section 15 of the Urban Mass Transportation (UMT) Act of 1964, as amended.

This report consists of three chapters. Chapter 1 contains an introduction to the Section 15 reporting system and its relationship to the Section 9 program. Chapter 2 contains aggregate industry statistics derived from the complete Section 15 reports which were submitted. Chapter 3 contains financial and operating data on the individual transit systems that submitted complete Section 15 reports.

All data in this report are for transit years ending on or between January 1 and December 31, 1989.

17. Key Words
mass transportation; public transportation; transit data; revenues; expenses; maintenance data; accident data; formula-apportioned assistance; vehicle miles; passenger miles; route miles; fleet inventory; performance indicators

18. Distribution Statement
DOCUMENT IS FOR SALE BY THE SUPERINTENDENT OF DOCUMENTS, U. S. GOVERNMENT PRINTING OFFICE, WASHINGTON, D.C. 20401. SEE ORDER FORM ON LAST PAGE OF THIS REPORT.

CHAPTER 1

INTRODUCTION - UNDERSTANDING AND USING THIS REPORT

CHAPTER 1

INTRODUCTION - UNDERSTANDING AND USING THIS REPORT

This is the 1989 (and eleventh) Annual Report from the Section 15 Reporting System administered by the Urban Mass Transportation Administration (UMTA). The report provides detailed summaries of financial and operating data submitted to UMTA by the nation's mass transit systems. Extensive data are provided for 498 of the nation's mass transit systems, including systems operated and/or administered by transit authorities, states, city departments and private operators under contract to public agencies. Of the 498 transit systems included in the 1989 report, 248 of these reporters contract for some or all of their transportation service from private or public agencies. This report was produced under contract by COMSIS Corporation under the guidance of UMTA's Office of Capital and Formula Assistance.

Section 15 of the Urban Mass Transportation Act (UMT Act) of 1964, as amended, provides for establishment of a uniform system of transit accounts and records plus a reporting system for the collection and dissemination of public mass transportation financial and operating data by uniform categories. All applicants and direct beneficiaries of Federal assistance under Section 9 of the UMT Act are subject to the reporting system and the uniform system of accounts and records. The purpose of the Section 15 reporting system is to assist in meeting the needs for information on which to base planning for public transportation services and to make public sector investment decisions at all levels of government.

This Annual Report contains Section 15 data for transit systems' fiscal years ending during Calendar Year 1989 (i.e., on or between January 1, 1989 and December 31, 1989). This is the seventh Section 15 Annual Report published on a calendar year basis (1983 was the first). The annual reports for the years 1979-1982 contain data for transit systems' fiscal years ending between July 1 of one year and June 30 of the following year.

Each chapter contains an introduction designed to aid in interpreting and using the data presented. The chapter introductions also present important information on table format changes from previous editions of the annual report. The changes are designed to improve the clarity and accessibility of the data. No changes to the table formats have been made from the 1988 annual report to this 1989 edition.

1.1 HOW IS THE REPORT ORGANIZED?

The report is organized into three chapters and three appendices.

CHAPTER 1 - **INTRODUCTION**: Provides general information related to understanding and using this 1989 report and earlier Section 15 annual reports.

CHAPTER 2 - **AGGREGATE TRANSIT STATISTICS**: Discusses financial and operating data summarized for groups of transit systems categorized by mode type and size of operating fleet in maximum service.

CHAPTER 3 - **INDIVIDUAL TRANSIT SYSTEM STATISTICS**: Contains financial and operating data by specific mode for individual transit systems. Extensive data are provided for 498 of the nation's mass transit systems listed alphabetically by state and then numerically by Section 15 Identification Number within each fleet size (vehicles operated in maximum service) category.

APPENDIX A - **LIST OF TRANSIT SYSTEMS SORTED ALPHABETICALLY BY STATE**

APPENDIX B - 1989 U.S. URBANIZED AREAS AND TRANSIT ID NUMBERS (FLEET SIZE BY UZA)

APPENDIX C - 1980 U.S. URBANIZED AREAS (UZAs), CODES, POPULATIONS, AND DENSITIES (ALPHABETICALLY BY STATE)

APPENDIX D - GLOSSARY

1.2 HOW ARE THE STATISTICAL TABLES ORGANIZED?

The statistical tables in Chapters 2 and 3 are organized into four major groups:

- transit revenues;
- transit expenses;
- non-financial operating data; and,
- performance indicators.

The first three groups of tables (transit revenues, expenses, and non-financial operating data) contain summaries of the data required by the Section 15 reporting system. The more detailed financial information reported by those transit systems that file at one of the three voluntary reporting levels is aggregated to equivalent required-level data prior to generating these tables. The fourth group of tables displays performance indicators composed of selected statistics derived from data in the first three groups. Typically, these indicators are computed as ratios, relating measures of input to measures of output (e.g., operating expenses per vehicle revenue hours).

Within each table, the data are organized by transit system size, as categorized by the number of vehicles operated in maximum service for both directly operated and purchased service. (See Section 1.3 for additional information on these fleet size categories.) Seven size groupings are used:

- 1,000 and over vehicles operated in maximum service;
- 500-999 vehicles operated in maximum service;
- 250-499 vehicles operated in maximum service;
- 100-249 vehicles operated in maximum service;
- 50-99 vehicles operated in maximum service;
- 25-49 vehicles operated in maximum service; and
- under 25 vehicles operated in maximum service.

Depending on the specific table, a multi-modal system may be categorized by the number of vehicles operated in maximum service for a single mode or by the total or combined fleet size for all modes. The total number of vehicles operated in maximum service for each mode and for all modes combined can be found in Appendix A, where transit systems are listed alphabetically first by state, then by transit system name.

The tables list transit systems by fleet size categories and within each category, first alphabetically by state and then numerically by Section 15 identification number. The letter "P" following the Section 15 identification number indicates that the transit system is a privately owned carrier.

The numbering system of the statistical tables presented in this Section 15 Annual Report are identical to those used since 1983. The report tables have been renumbered from earlier reports (1979-1982) to accommodate table changes and consolidations. Also, when performing time-series analysis, refer to the introductory text for Chapters 2 and 3 for information on all table format changes.

1.3 SPECIAL NOTES ON SECTION 15 REPORTING AND THIS ANNUAL REPORT

Several general issues pertaining to the Section 15 reporting system and this annual report are summarized below. These discussions are designed to aid in interpreting and using the data published in this report.

Alphabetical and Identification Number Listings. The first four Section 15 reports (1979-1982) organized transit systems by revenue fleet size. The 1983 and 1984 published tables listed Section 15 reporters by fleet categories, then alphabetically by state and, within a state, alphabetically by transit system name. Sorting by state permits easier location of data in tables for specific transit systems and allows users to examine statistics within geographical as well as fleet size groupings. Beginning with the 1985 report, the transit systems are organized by fleet categories, then alphabetically by state and, within a state, numerically by Section 15 identification number. This organization enables easier location of specific transit systems by data analysts.

Calendar Year. The Section 15 reporting year was changed for the 1983 and all subsequent reports from July 1 through June 30 to a calendar year period (i.e., January 1 to December 31). This change only affected the grouping of data published in the Section 15 Annual Reports and stored in the computer data base; it did not affect transit systems' fiscal years, Section 15 report due dates, nor the data contained in transit systems' report submissions. The change to a calendar year for Section 15 reporting helped to end confusion between transit agencies' fiscal years and the Section 15 reporting year. The change also created a one time only 6-month transition period for transit systems' fiscal years ending on or between July 1 and December 31, 1982. The data from transit systems with fiscal years ending in this transition period were not published, but were stored in the computerized data base and are made available in computer-readable form from UMTA. The data summarized in the 1989 Annual Report are from transit systems' fiscal years ending on or between January 1, 1989 and December 31, 1989.

Data Base Adjustment. Summaries of financial and operating data contained in this report are based on the most recent submissions by transit systems as of the publication date. However, audits or other reviews made at later dates may result in changes which more accurately reflect actual statistics. While future addendums will not be published to this Annual Report, it should be noted that some changes may be made after publication of the 1989 Annual Report; those changes will be reflected in the Section 15 data base which UMTA maintains and distributes in computer-readable formats.

Modes and Vehicle Type Codes. Beginning with the 1983 report, the following mnemonic codes represented by two alphabet letters are used to describe modes and vehicle types in data tables and appendices:

Mode Codes

AG	Automated Guideway
CC	Cable Car
CR	Commuter Rail
DR	Demand Response
FB	Ferry Boat
IP	Inclined Plane
JT	Jitney
MB	Motorbus
RR	Rapid Rail
SC	Streetcar or Light Rail
TB	Trolleybus
TR	Aerial Tramway
VP	Vanpool

Vehicle Type Codes

AB	Articulated Motorbus
AG	Automated Guideway Vehicle
AO	Automobile
BA	Motorbus, Class A (>35 seats)
BB	Motorbus, Class B (25-35 seats)
BC	Motorbus, Class C (<25 seats)
CC	Cable Car
DB	Double Decked Bus
FB	Ferry Boat
IP	Inclined Plane
RL	Commuter Rail Locomotive
RP	Commuter Rail Passenger Coach
RR	Rapid Rail Vehicle
RS	Commuter Rail, Self-Propelled Passenger Car
SB	School Bus
SC	Streetcar/Light Rail Vehicle
TB	Trolleybus
TR	Aerial Tramway
VN	Van

As described below, a "P" following the mode code in Chapter 3 operating data tables indicates that the mode is provided under a purchased services arrangement.

Multi-Area Reports. Some Section 15 reporters, particularly commuter rail systems, provide data for transportation services serving more than one urbanized area (UZA). For Section 15 reporting purposes, a transit system serving more than one UZA and filing a single Section 15 report for its agency has been assigned to the single UZA that received the majority of transportation service. (UZA assignments are listed in Appendix A.)

Public and Private Transit Systems. Beginning with the 1984 report, the annual report identifies each transit system that is privately owned in order to clearly distinguish between public and private transit systems. This distinction is based on the reporting transit systems' Form 001 of their Section 15 report where they indicated their type of organization. Where reporters indicated "other" organization on Form 001, their descriptions of themselves on Form 005 were used. A "P" following a transit system's Section 15 identification number in the 1989 Annual Report tables indicates that the transit system is privately owned.

Purchased Transportation. Many transit systems contract for transportation services. These contracted services may be provided by public agencies and/or private carriers and usually represent relatively small portions of the total services provided by these systems, although there are exceptions. For the first four Section 15 reporting years (1979-1982), statistics for purchased services were not distinctly separated from those for services directly operated by the transit system. Some transit systems submitted data for purchased services while others did not. This situation was particularly true for operating expenses. Thus, some statistics in previous reports are difficult to interpret. Comparisons using data from two transit systems, for example, may be biased somewhat because one system included purchased transportation statistics, while the other did not. Similarly, performance measures which relate operating costs to service provided may be misleading if they include incomplete operating costs for services provided under contract. Beginning with the 1983 reporting year, procedural changes were made to correct this problem. Transit systems were instructed to split purchased transportation expenses into two categories: (1) expenses for contract carriers each of which used fewer than 50 revenue vehicles in maximum service to provide contract services (object class code 508.01); and (2) expenses for those contract carriers using 50 or more revenue vehicles in maximum service (object class code 508.02). Note that these are contract costs. In most cases, these do not represent the total costs of operating the purchased service; the contractor usually recovers some costs through fare collection. Also, transit systems were directed to submit two sets of operating data: (1) data for directly operated services only; and (2) aggregate data for services purchased from small providers only (less than 50 revenue vehicles in maximum service). A separate Section 15 report was submitted for each contract carrier using 50 or more revenue vehicles in maximum service to provide contract services.

To obtain a more accurate picture of the total cost of purchased transportation, transit systems were instructed to include fares retained by the contractor in object class codes 508.01 and 508.02. In some instances the inclusion of retained fares overstates the cost of purchased transportation. However, it is generally thought that the inclusion of retained fares brings the purchased transportation costs closer to the true cost of the service.

These actions have improved the ability to distinguish between purchased services and directly operated services. Thus, the Section 15 Annual Report now contains many tables where purchased and direct services are clearly identified. Purchased transportation expenses as reported in object class 508.01 and 508.02 have been extracted from total operating costs and are presented in separate columns or rows in several tables to reflect more accurately a transit system's total operating expenses for directly operated service. Note, however, that contract carriers using 50 or more revenue vehicles in maximum service to provide contract services are listed in the Annual Report as directly operated services since a separate report is submitted for these services. UMTA is working on identifying these data as purchased transportation in future annual reports. Users of this report may be able to identify these purchased transportation services by the "P" following the identification code which indicates that the transit system is privately owned.

In addition, beginning with the 1984 Section 15 reporting year, reporters were allowed to allocate their expenses in any object class, including purchased transportation expenses, to any functional category. This enabled reporters to distribute purchased transportation expenses by the functions of vehicle operations, vehicle maintenance, non-vehicle maintenance, and general administration. Previously, reporters were required to submit all purchased transportation expenses under general administration. This change in reporting requirements may affect time-series analyses performed on expenses by function.

Mode specific operating data are identified as being part of a purchased service arrangement by a "P" added to the mode code. Where unspecified, data are for directly operated public and large contract operations only.

Questionable Data Items. In the 1984 through 1987 annual reports, data whose validity and reliability are questionable were not entered into the Section 15 data base. Beginning with the 1988 report, the value of the data is included in the data base followed by a "Q" for questionable data. The data affected are those where the transit system failed to respond satisfactorily to questions raised during the validation process and/or did not collect the data in accordance with required (UMTA) definitions and requirements. A data item was not entered in the data base by UMTA when one or more of the following circumstances existed:

1. The transit system did not provide the complete cost of purchased transportation.

2. The transit system did not provide the required breakdown of the miles reported as motorbus directional route miles.

3. The Section 9 data certification by the independent auditor stated that the data were not collected in accordance with UMTA's definitions and requirements.

4. The transit system did not provide sufficient information to validate the data.

5. The transit system reported the same data for 1988 and 1989.

Transit System Names and Identification Codes. Due to space limitations, transit system names are abbreviated using 25 characters or less. The geographical area served has been included in cases where it is not an integral part of the transit system name. The first digit of this number corresponds to the UMTA Region in which the transit system is located (UMTA Regions 1-10). (Note: Identification numbers beginning with a zero indicate UMTA Region 10.) As described above, a "P" following the identification code indicates that the transit system is privately owned.

Vehicles Operated in Maximum Service. Beginning with the 1984 report, vehicles operated in maximum service for both directly operated and purchased transportation services is the fleet size criterion for grouping transit systems in each of the tables throughout the report. Vehicles operated in maximum service data are reported by mode on Form 003 (directly operated service) and Form 004 (purchased transportation service). Maximum service is the revenue vehicle count taken during a reporting transit system's maximum season of the year, on the week and day that this maximum occurs. It is not taken on a day when a special event or extreme set of circumstances would cause the resulting tally to represent a "one time" event rather than a recurring maximum service requirement. This fleet size category provides a more meaningful profile of transit systems' operating characteristics since it does not include spare and stored vehicles in the various performance indicator comparisons in this report.

In years previous to 1984, the fleet size grouping criterion was the total number of revenue vehicles counted at the end of a reporter's fiscal year. This number was reported on Form 001. Consequently, in some cases the use of vehicles operated in maximum service significantly decreases the size of fleets from prior year reports. As a result, some systems may be listed in a smaller fleet size category than in previous reports (i.e., 1983 and earlier reports).

The 1985 through 1989 annual reports use vehicles operated in maximum service data in the service supplied and consumed data tables and in the performance indicator tables (Tables 2.13, 2.15, 3.16, 3.18.1, 3.18.2, 3.18.3, and 3.18.4). The 1984 report also included vehicle data in these tables from Forms 406 and 407. These forms provide the maximum number of vehicles in operation at any time during an average weekday. In the 1985 through 1989 annual reports almost all of the Forms 406/407 data have been replaced with the vehicles operated in maximum service data from Forms 003/004 for improved consistency and more meaningful data. The exceptions to this are the maximum number of trains operated in average weekday data in Table 2.13 and the maximum number of vehicles operated in average PM peak period and average base period in Table 3.18.1. These data are only reported on Forms 406/407.

Vehicles for Directly Operated and Purchased Transportation Services and Vehicles for a Specific Mode. As explained above, vehicles operated in maximum service for both directly operated and purchased transportation services data are used to create fleet size categories in the 1989 Annual Report. However, in directly operated service only tables, the specific vehicle counts provided are only from those directly operated by the transit system, as reported on Form 003. Therefore, a transit system may be grouped in a larger fleet size category than the number of vehicles shown in a specific table. For example, a transit system that both directly operates and purchases services for a total of 620 vehicles (as reported on Forms 003/004) is grouped in the 500-999 vehicles operated in maximum service category. However, this transit system would show only 450 vehicles in the vehicles operated in maximum service column in a directly operated services only table since only 450 vehicles are directly operated (as reported on this transit system's Form 003). Footnotes have been added to several tables in Chapter 3 to indicate when the vehicles operated in maximum service data are taken only from directly operated services.

Multi-modal transit systems are included in categories for the number of vehicles operated in maximum service for the combined fleet size for all modes except in those tables in Chapter 2 which are specific to a particular mode (i.e., Tables 2.06, 2.07, 2.10, 2.12, 2.13, and 2.15). In those cases, a multi-modal system is categorized by the number of vehicles operated in maximum service for a single mode only. Chapter 2 tables in the 1989 Annual Report indicate in column headings whether the vehicle count is for the entire transit system or for only a single mode.

Vehicles Available for Maximum Service. Table 3.16 of the 1985 through 1989 annual reports includes a column for vehicles available for maximum service. These data are reported on Forms 003 and 004. They represent the total active service fleet and include spares, out of service vehicles, and vehicles in or awaiting maintenance. They do not include vehicles being held for sale, emergency contingency use, etc. If the total active fleet for a given mode varies during the year, the reported figure represents the same time period as that used to report vehicles operated in maximum service. Thus, the difference between vehicles available for maximum service and vehicles operated in maximum service can be used to compute a transit system's spare ratio. The vehicles available for maximum service data in Table 3.16 replaces the trains operated in average weekday maximum service data in previous reports (i.e., 1984 and earlier reports).

The 1989 Annual Report continues to include "total active fleet" data from Form 408 in Tables 2.14 and 3.17 as was done in the 1984 and subsequent annual reports. Unlike the vehicles available for maximum service data described above, the total active fleet data in Tables 2.14 and 3.17 represent only those vehicles owned by the reporting transit system at the end of its fiscal year and are reported by vehicle type, not mode.

1.4 HOW GOOD ARE THE DATA?

The Section 15 data submitted to UMTA by transit systems are subjected to extensive analysis and validation, both manual and automated. The process entails detailed examination of each transit system's report, the identification of errors or questionable entries, and direct resolution of these problems in conjunction with the reporting transit system.

UMTA's role in this process is to identify and resolve questions of data completeness and accuracy and give final approval to a system's data as a prerequisite to entry into the Section 15 data base and annual report. UMTA can reject a transit system's report if this report is not in full compliance with reporting requirements or not enter any data items whose reliability are in question, but UMTA cannot change any reported data; all data changes must be made by the reporting transit system.

In general, the quality of the data base improves each year as UMTA simplifies and clarifies definitions of data items and reporting procedures, and designs more sophisticated validation checks. Despite extensive efforts, it should be noted that data validation encompasses primarily a review of the consistency and reasonableness of the reported data. Because of the limitations of these procedures, as well as the amount of data being validated, it is likely that some erroneous data have found their way into this report. In general, it is felt that most errors of significant magnitude have been detected and corrected, but that some relatively minor errors will remain. These errors generally will derive not from the reporting or data processing procedures per se, but from: (1) difficulties experienced by transit systems in obtaining accurate information in certain instances; and (2) misinterpretation of certain data definitions.

CAUTION: Because of these limitations and the fact that not all relevant information is reported (weather conditions, topography, work rules, etc.), users of this report should not draw unwarranted conclusions from the examination of the data contained in this report. Although comparative evaluations are appealing, analyses of the reported data are not sufficient to account completely for apparent differences in performance. Such evaluations should encompass more detailed examination of the underlying factors to determine the extent to which apparent differences are due to unique aspects of the transit system's operating environment, specific management practices, or unusual events during the period covered.

1.5 FURTHER INFORMATION ON THE SECTION 15 REPORTING SYSTEM

The following UMTA documents provide a more detailed description of the Section 15 reporting system:

- Urban Mass Transportation Industry Uniform System of Accounts and Records and Reporting System, January 10, 1977.

  ☐ Volume 1 - General Description

  ☐ Volume II - Uniform System of Accounts and Records

  These two volumes provide an overview of the Section 15 system, discussions of potential applications of Section 15 data, and the definitions used for the uniform system of accounts and records.

- Reporting Manual and Sample Forms (All Reporting Levels), revised April 1989.

  This manual provides all of the reporting instructions and sample forms used by Section 15 reporters filing 1989 reports at all reporting levels-R (Required) or A, B, or C (Voluntary).

- UMTA Circular 2710.1A, Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System, July 18, 1988.

- UMTA Circular 2710.2A, Sampling Procedures for Obtaining Demand Responsive Bus Operating Data Required Under the Section 15 Reporting System, July 22, 1988.

- UMTA Circular 2710.4A, Revenue Based Sampling Procedures for Obtaining Fixed Route Bus Operating Data Required Under the Section 15 Reporting System, July 22, 1988.

  These three circulars suggest optional sampling procedures for collecting unlinked passenger trip and passenger mile data required for Section 15 reports. Complete instructions and worksheets are provided for those transit systems wishing to use these procedures.

- UMTA Circular 2710.6, Section 15 Accounting and Reporting Release #1, July 1, 1988.
- UMTA Circular 2710.7, Section 15 Accounting and Reporting Release #2, July 1, 1988.

  These two Circulars raise and discuss certain questions related to Section 15 accounting and reporting requirements not addressed elsewhere.

- UMTA Circular 9030.1A, Section 9 Formula Grant Application Instructions, September 18, 1987.

  This Circular provides guidance on how to apply for grants under the Section 9 formula grant program. It also discusses the use of Section 15 data in the computation of Section 9 apportionments.

- Data User's Guide to the UMTA Section 15 Reporting System, Transportation Systems Center, June 1, 1989.

Volumes I and II of the "...Uniform System of Accounts and Records and Reporting System" are available to the public from the National Technical Information Service (NTIS; No. UMTA-IT-06-0094-77-1). The User's Guide is available through the McTrans Center (telephone 904/392-0378). The other documents are available through:

1.6 INDUSTRY-GOVERNMENT COOPERATION

The Section 15 Reporting System evolved from the transit industry-initiated Project "**FARE**" (Uniform Financial Accounting and Reporting Elements). Over the years, a cooperative working arrangement has developed between the transit industry and the Federal government on the Section 15 data collection and reporting system. The private and public sectors have recognized the importance of and need for timely and accurate data on which to assess the continued progress of the nation's mass transportation systems.

In January 1983, the UMTA Section 15 Reporting System Advisory Committee was established to make recommendations on improving the quality and usefulness of the data collected under the Section 15 program. Many of the past improvements to the annual report are the results of the Advisory Committee's recommendations. The Advisory Committee's charter expired on September 30, 1986. UMTA continues to work closely with individuals and organizations in the transit industry to improve the Section 15 reporting system and its annual report.

To help promote this cooperative effort, UMTA urges all interested parties, including transit operators, State and local governments, planning organizations, trade unions, research organizations, and others to review and critique this 1989 edition of the National Urban Mass Transportation Statistics. Comments and suggestions should be forwarded to:

1.7 AVAILABILITY OF MACHINE-READABLE SECTION 15 DATA

The data contained in the individual transit system statistics tables (i.e., Chapter 3) in the Section 15 annual reports from 1981 to 1989 are available on floppy diskettes for use on microcomputers. These diskettes (double sided) are organized by report table and are compatible for use on an IBM-PC using Lotus 1-2-3 software. They contain the actual data reported by transit systems in cases of questionable data, not the "Q" found in the 1984 through 1987 annual reports. Beginning with the 1988 diskette, the value of the data is included followed by a "Q" for questionable data. In addition, diskette sets organized by fleet size are available for report year 1981 only. These sets are available in either an Apple II DIF format or a single-sided IBM-PC DIF format. For further information on diskette availability and costs, please contact:

McTrans Center
512 Weil Hall
University of Florida
Gainesville, FL 32611-9988
Telephone: (904) 392-0378

Complete Section 15 data (including required-level data not published in this report), all voluntary-level data, and data for prior reporting years, are also available on magnetic tapes. For further information, please call the Transportation Systems Center in Cambridge, Massachusetts at (617) 494-2938, or write to U.S. Department of Transportation, Transportation Systems Center, DTS-49, Kendall Square, Cambridge, MA 02142.

CHAPTER 2

AGGREGATE TRANSIT STATISTICS

CHAPTER 2

AGGREGATE TRANSIT STATISTICS

Chapter 2 provides a summary at one point in time of the state of the national transit industry. Since this is the eleventh annual report, the data herein can also be used to examine historical trends of the industry. The tables of aggregate transit industry statistics included in Chapter 2 were compiled from the Section 15 data submitted to UMTA by the reporting systems. These tables do not contain all data reported at the required reporting level, but only selected data items intended to summarize major characteristics of the nation's transit industry. Beginning with the 1989 Annual Report figures 2.01 through 2.09.2 have been modified to improve data clarity. However, data consistency with prior years has been maintained. Additional aggregate data can be computed from individual system statistics in Chapter 3 or from the Section 15 public use tape. (See Chapter 1, Section 1.7)

Although some of the tables differ in format, most are similar in appearance. Most of the tables contain eight columns, the first seven of which contain data for different fleet size categories, and an eighth which contains totals for all reporting systems.

Because of reduced reporting requirements for several transit modes and space limitations, data for every mode are not reported individually in every table in this chapter. For example, modes operated by only a few systems, such as cable car, are not reported separately in all tables. Data for all modes, including those eliminated from particular tables, are used in compiling "Joint Expenses" and "Total All Modes." Statistics for the eliminated modes may be compiled from individual system tables provided in Chapter 3.

Where data are presented by transit mode, the number of vehicles operated in maximum service refers to the number of vehicles in the specific mode presented. Where data include all modes, the number of vehicles includes modes not identified individually in the table.

The row titles in most tables are taken directly from applicable Section 15 reporting forms. For example, row headings in Table 2.09 repeat the object class codes contained on Form 331.

In cases where data were not applicable, some transit systems did not report the data used to compile specific aggregate tables. Consequently, "transit systems reporting these data" in some instances is less than the "total transit systems".

The tables in this chapter have various applications. For example, subject to the limitations discussed in Chapter 1, transit systems can examine statistics describing various aspects of their performance with comparable aggregate statistics for other transit systems within their "peer group" as determined by modes or fleet sizes.

CAUTION: The statistics in Chapter 2 are not aggregated by other factors which normally would affect the definition of peer groups (climate, types of population served, etc.) nor are all relevant information contained in the tables (work rules, strikes and other unusual events affecting service during the reporting year, etc.). Thus, this analysis will serve primarily to "flag" certain aspects of performance which could be analyzed as potential areas for improvement.

Chapter 2 contains statistical tables covering four major areas:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

2.1 SPECIAL NOTES ON THE AGGREGATE DATA TABLES

Several issues pertaining to the Section 15 reporting system and the 1989 Annual Report are summarized in Section 1.3 of the Introduction (Chapter 1). Users of Chapter 2 tables should refer to this section for a better understanding of the data, particularly the discussions of purchased transportation, vehicles operated in maximum service, and questionable data items. To avoid confusion, especially when performing comparative analyses using previously published reports, users should refer to these sections as well as to the discussions of individual tables below.

2.2 TRANSIT REVENUES

Tables 2.01 through 2.05 contain aggregate information on the types and sources of revenue for Section 15 reporting transit systems. These tables present an aggregate description of industry-wide transit revenues, including sources and percentage distributions of revenue within groups, as defined by fleet size. Under Section 15 requirements, revenues are reported only by transit system totals, not by individual mode. Since 29 percent of all transit systems operate only motorbus service, separate revenue tables are provided for: (1) single mode motorbus transit systems; and (2) all transit systems, including single mode motorbus transit systems. Data are provided on the following:

- revenue sources, including passenger fares and various types of local, State, and Federal assistance;
- sources of local, State, and Federal funds for operating and capital assistance; and
- types of State and local taxes used for operating and capital assistance, such as income, sales, and property taxes.

Beginning with the 1987 report, the definition of transit fare revenues was clarified to only include fare revenues for directly operated service on the revenue summary schedule and the revenue detail schedule. Fare revenues from purchased service are not to be reported on the revenue schedules. This clarification might result in a decrease in fare revenues in the 1988 and 1989 reports for those agencies that included purchased transportation fare revenues.

Transit revenue data are contained in the following tables:

2.01 Sources of Transit Revenue. (Single Mode Motorbus Reporters and All Reporters)

The data on this table are taken from Forms 201, "Revenue Summary Schedule" (R-level), 202, "Revenue Detail Schedule" (A-,B-, or C-level), and 203, "Revenue Subsidiary Schedule-Sources of Public Assistance." Although data are taken from different forms, percentages total to 100 because total public assistance is equal on Forms 201/202 and Form 203.

2.02 Sources of Public Operating Assistance for Transit. (Single Mode Motorbus Reporters and All Reporters)

Data are derived from Form 203, "Revenue Subsidiary Schedule-Sources of Public Assistance."

2.03 State and Local Taxes Dedicated at Their Source for Transit Operations. (Single Mode Motorbus Reporters and All Reporters)

Data are derived from Form 203, "Revenue Subsidiary Schedule-Sources of Public Assistance."

2.04 Sources of Public Capital Assistance for Transit. (Single Mode Motorbus Reporters and All Reporters)

Data are derived from Form 103, "Capital Subsidiary Schedule-Sources of Public Capital Assistance."

2.05 State and Local Taxes Dedicated at Their Source for Transit Capital. (Single Mode Motorbus Reporters and All Reporters)

Data are derived from Form 103, "Capital Subsidiary Schedule-Sources of Public Capital Assistance."

POTENTIAL DATA APPLICATIONS

These data allow local and State officials to review the extent to which transit systems generally recover expenses from fares, and the extent to which they rely on local, State, and Federal assistance.

Analysis also is possible on the extent to which transit operators receive revenue from dedicated and/or general revenue sources. Dedicated sources restrict funds to transportation-related expenditures, while transit must compete with other public programs for general revenues. For example, local officials might gain useful insight into other potential revenue sources by examining the types and amounts of local and State dedicated taxes utilized by peers, including sales, property, and gasoline taxes. State and Federal policymakers can analyze the likely aggregate effects of changes in grant programs on the types and amounts of other revenue sources used by transit operators.

The revenue data in these tables can be contrasted to comparable data in the previous annual reports to indicate how funding sources and levels have changed over time. This might be of interest to state and Federal policy-makers contemplating changes in transit assistance programs, and to transit equipment manufacturers interested in correlating product demand to shifts in funds dedicated to capital.

Summaries of revenue sources, for single mode motorbus transit systems and for all transit systems respectively, are summarized graphically in Figures 2.01 and 2.02. Further breakdowns of public operating assistance for motorbus and for all transit systems are summarized in Figures 2.03 and 2.04.

2.3 TRANSIT EXPENSES

Tables 2.06 through 2.09 contain aggregate information on the types and amounts of expenses incurred by Section 15 reporting transit systems. In Section 15 reports, transit expenses are stratified (1) by "functions" and (2) by "object classes."

EXPENSES BY FUNCTION

Functional classes divide operating expenses into four major categories represented by two digit mnemonic codes:

- (VO) Vehicle Operations;
- (VM) Vehicle Maintenance;
- (NM) Non-Vehicle Maintenance; and
- (GA) General Administration.

Further functional breakdowns are provided by transit systems reporting at voluntary levels A, B, or C. This detail is not contained in this report, but is available on the Section 15 public use tape. (See Chapter 1, Section 1.7)

The transit expense tables provide statistical information about transit expenses not only by fleet size, but also by transit mode. For each of the various functional categories, transit systems operating multiple modes must allocate "joint expenses" across object classes in a functional category.

Analyses of expenses by function must be qualified by the degree to which transit systems uniformly allocate expenses among the various functional categories. The allocation of most expenses is relatively straightforward, but some allocations are more judgmental, such that similar expenses of certain types may be allocated differently by different transit systems. While this is not a major problem, care should be taken in the analysis of specific data items which may lend themselves to differing interpretations regarding allocation to functional categories.

EXPENSES BY OBJECT CLASS

Object classes divide operating expenses into categories such as labor, fringe benefits, services, and materials and supplies. More detailed object class breakdowns are provided by the voluntary-level reports, and are available on the Section 15 public use tape. (See Chapter 1, Section 1.7.)

A separate "Joint Expenses" page is included in Table 2.07 because the Section 15 reporting forms allocate joint expenses to individual modes by function, but not by object class. Joint expenses are those operating expenses of multimode agencies which cannot be allocated by object class. For example, if Vehicle Maintenance-Utility expenses (function number 041, object class 505) are shared by motorbus and trolleybus, these are categorized and reported as joint expenses. These expenses are added to other comparable joint expenses (i.e., for these same two modes, for the Vehicle Maintenance function, for different object classes) and the totals are allocated between the two modes. This procedure makes it possible to compute a total expense by function for each mode. However, a comparable total cannot be computed for specific object classes (e.g., utilities expenses) since the joint expenses for individual object classes are not apportioned to the specific modes. Thus, for a given mode, "total" expenses for object classes such as operator's salaries and wages exclude any reported joint expenses. Joint expenses are summarized in a separate page for all modes. Because use of joint expense categories varies among operators, this could affect comparisons that use object class totals.

The "Total All Modes" page in Table 2.07 is identical to the individual mode and joint expenses tables, except for two additional rows which show "reconciling items" (e.g., interest expenses, leases and rentals, depreciation) and "total expenses" including reconciling items. Under the Section 15 Uniform System of Accounts and Records, reconciling items are reported only for system totals, and not separately by mode.

Reconciling items are needed to provide an overall total which is consistent with local published reports. They are reported separately under Section 15 because local accounting practices for handling such items (particularly depreciation and amortization) differ widely. Generally, analysts using Section 15 data exclude reconciling items from operating expenses. Although this actually understates true operating costs, it alleviates the problems inherent in inconsistent treatment of reconciling items.

In Chapter 3, Operating Expenses listed in the tables for individual transit systems exclude reconciling items.

Beginning with the 1987 report, transit systems were instructed to include fares retained by the contractor when reporting expenses for purchased transportation services (object class codes 508.01/508.02). This will result in a more accurate picture of the total cost of purchased transportation services. The amounts reported in object class codes 508.01 and 508.02 will increase for those agencies where the purchased transportation provider retains the fare revenue.

Aggregate transit expenses data are contained in the following tables.

2.06 Transit Operating Expenses by Mode and Function.

Data in this table are derived from several 1989 expense report forms: 301 and 310 (R-level); 311 (A-level); 312 (B-level); and 313 (C-level).

For each mode, fleet size categories are for the modes specified. For the total all modes section on the last page, all modes are combined to determine the fleet size category.

2.07 Transit Operating Expenses by Mode and Object Class.

Eight separate tables are provided: motorbus; rail rapid; streetcar; trolleybus; vanpool, demand response; joint expenses; and total of all modes. Data are taken from the same Section 15 reporting forms as are used to generate Table 2.06, plus Form 315 (A-,B-, and C-level).

For the first six pages, fleet size categories are for the mode specified. For the last two pages (joint expenses and total), all modes are combined to determine the fleet size category.

NOTE: The line labelled "Total Operating Expenses $ In Millions," which appears in each of the modal pages in Table 2.07

(third line from the bottom of the page), does not include the joint expenses of multi-mode transit reporters. Joint expenses, which are those operating expenses of multi-mode agencies which cannot be allocated by object class, are all shown in the Joint Expenses page of Table 2.07. Further explanation about joint expenses is provided in the above section on expenses by object class.

2.08 Operating Expenses by Function and Object Class for Single Mode Motorbus Transit.

Eight separate pages are provided for each of the several fleet size categories, plus a page for all single mode motorbus systems. Data are derived from Form 301 (R-level), 311 (A-level), 312 (B-level), and 313 (C-level).

2.09 Employer and Employee Paid Fringe Benefits.

Data are derived from Form 331, "Fringe Benefits Subsidiary Schedule." This form is required only from transit systems operating more than 25 revenue vehicles in any mode in maximum service. Data in this table represent system totals, since fringe benefit payments are not reported separately by mode.

POTENTIAL DATA APPLICATIONS

These data can be used to provide a gross comparison of costs and cost distributions for a specific transit system with comparable information for all other reporting transit systems within selected mode and size groups. Potentially, subject to more detailed analysis of underlying factors, this can help highlight certain problem areas or other areas having opportunities for cost reductions.

Again, conclusions from such analyses are limited because peer groups are presented only on the basis of fleet size and mode. Also, costs generally should be reviewed in conjunction with other operating and patronage data. This approach provides a more complete picture of transit performance.

Transit operating expenses by function are summarized in Figures 2.05 for motorbus transit, 2.06 for rail rapid transit, and 2.07 for all modes.

2.4 NON-FINANCIAL OPERATING DATA

Tables 2.10 through 2.14 contain aggregate non-financial operating data.

TRANSIT MAINTENANCE AND SAFETY

Table 2.10 summarizes numbers of accidents and roadcalls, and energy consumption. Use of these data for specific analyses generally requires additional data such as vehicle miles and age of fleet. More importantly, because the interpretation of what constitutes an accident or roadcall has not been uniform, these data are not entirely consistent from one transit system to another. Thus, accident and roadcall figures should be viewed simply as gross indicators with some utility for time-series analyses. Specific analyses of roadcalls as measures of maintenance performance require detailed examination of how roadcalls were defined. UMTA is continuing work to improve Section 15 definitions of accidents and roadcalls.

TRANSIT WAY MILEAGE

Directional route miles are reported on Form 403 and presented in Table 2.11. The term "directional route miles" is defined as the mileage service operates in each direction over routes which public transportation vehicles travel while in revenue service. Directional route miles are a measure of the facility or roadway, not the service carried on the facility, i.e., number of routes or vehicle revenue miles. They are determined by direction of service, but not by the number of traffic lanes or rail tracks existing in a given right-of-way. If vehicles travel in both directions, each mile is counted twice.

TRANSIT EMPLOYEE COUNT

Within each job category, the number of employees is expressed in terms of the number of employee equivalents for the year, to the nearest one-tenth employee (one employee equivalent equals 2080 labor-hours of work). This accounts for the fractions which appear in Table 2.12. To the extent that an employee works on capital projects, his or her labor is considered a capital expense; otherwise, it is an operating expense. Employee counts for the motorbus mode, including both single mode and multi-mode systems, are summarized in Figure 2.08.

SERVICE SUPPLIED AND SERVICE CONSUMED DATA

"Service supplied" data include vehicle miles, vehicle revenue miles, vehicle hours, and vehicle revenue hours. The difference between vehicle miles and vehicle revenue miles represents deadheading. "Service consumed" data refer to ridership information (measures of use of the service supplied), and include unlinked passenger trips and passenger miles.

Because passenger mile data are not normally collected by transit systems as a routine part of their operations, they are among the most difficult to collect. In most instances, they are collected using sampling techniques. While UMTA has suggested several such techniques, transit systems may use any sampling techniques which satisfy precision and confidence requirements of 10 percent and 95 percent, respectively. UMTA continues to be concerned that transit systems meet these precision and confidence requirements.

Service supplied and service consumed data are reported on Forms 406 (for non-rail modes) and 407 (for rail modes), and are reported in terms of average weekday, average Saturday, and average Sunday. Beginning with the 1984 report year provision was made on Forms 406 and 407 for reporting of annual totals, and the accounting for all days operated. From 1979-1982 the annual totals for service provided and consumed were estimated by assuming the operation of 253 weekday schedules, 53 Saturday schedules, and 59 Sunday and holiday schedules. In the 1983 report year, agencies had the option of either reporting their actual annual data or of UMTA using the above estimates.

Aggregate non-financial data are contained in the following tables.

2.10 Transit Accidents, Revenue Vehicle Maintenance and Energy Consumption.

The table includes eight of the modes reported under Section 15. The data are aggregated by fleet size for each mode by the number of vehicles operated in maximum service for that mode. Data are derived from Form 402, "Revenue Vehicle Maintenance Performance and Energy Consumption Schedule," and Form 405, "Transit System Accidents Schedule." For explanation of transit accidents and maintenance see above section on transit maintenance and safety.

2.11 Transit Way Mileage: National Summary.

Data are derived from Form 403, "Transit Way Mileage Schedule." For explanation of directional route miles, see above section on transit way mileage.

2.12 Transit System Employee Count.

This table includes seven of the modes reported under Section 15. The ferryboat mode was added to Table 2.12 beginning with the 1985 Annual Report. The data are aggregated by fleet size for each mode by the number of vehicles operated in maximum service for that mode. The data are taken from Form 404, "Transit System Employee Equivalent Schedule." Form 404 was revised beginning with 1985 Section 15 reporting to more closely match expenses functions. The revisions eliminated the major distinction between managerial and support (clerical) employees and eliminated the breakdown of capital labor employee equivalents. Table 2.12 was revised beginning with the 1985 Annual Report to reflect these revisions.

TRANSIT SYSTEM EMPLOYEE COUNT BY REVENUE FLEET SIZE

MOTOR BUS
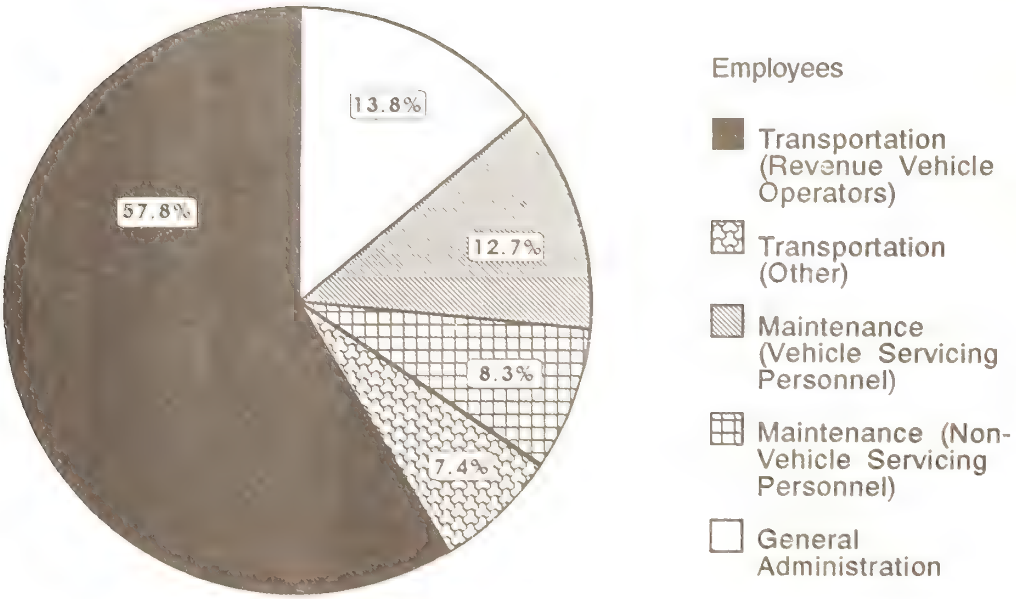
(ALL SYSTEMS)



For explanation of transit employee count, see above section by this title.

2.13 Annual Operating Statistics: Service Supplied and Service Consumed.

This table includes pages for five non-rail modes (motorbus, trolleybus, vanpool, demand response, and ferryboat) and for three rail modes (rail rapid and streetcar combined and commuter rail). Beginning with the 1985 edition, the annual report includes a section in Table 2.13 for all modes. This section provides data for each of the major modes and a total column which includes data for all modes reported under Section 15. All pages in Table 2.13 present data separately for those services directly operated and those services provided by a purchased service arrangement.

The service supplied and service consumed data are taken from Form 406, "Transit System Service Supplied, Service Consumed, Service Personnel & Service Operated Schedule (Non-Rail Modes)," and Form 407, "Transit System Service Supplied, Service Consumed, Service Personnel & Service Operated Schedule (Rail Modes)." Beginning with the 1985 Annual Report, all vehicle count data in Table 2.13 with one exception are derived from Forms 003 (directly operated service) and 004 (purchased transportation service) instead of Forms 406 and 407 used in previous annual reports. The one exception is for maximum number of trains operated in average weekday. This data item is only reported on Form 407. See Section 1.3 of Chapter 1 for further details on the vehicle data.

2.14 Summary Age Distribution of Revenue Vehicle Inventory.

Data are shown by vehicle type and age of vehicles in the total active fleets. The source is Form 408, "Revenue Vehicle Inventory Schedule." The vehicle type codes are described in Section 1.3 of Chapter 1. The age of a vehicle is determined by the date of its manufacture.

Vehicle age distributions also are summarized graphically in Figures 2.09.1 and 2.09.2. The use of "total active fleet" data in this table was also used in the 1984 and 1985 annual reports. This represents a change from previous annual reports which used "total fleet size" data.

POTENTIAL DATA APPLICATIONS

At a national level, these operating data can be used to help answer questions on what service was provided in return for the nationwide investment in transit; how many employees, how much fuel, and how many vehicles, for example, were required to provide that service; how safe was the service; and how much use was made of the service by transit patrons.

2.5 PERFORMANCE INDICATORS

Performance indicators are not reported directly, but are derived measures. For example, they can relate measures of service outputs or utilization (e.g., vehicle revenue miles, passenger miles) to measures of resource inputs (e.g., vehicle operated in maximum service, operating expenses, employees). The data in these tables are weighted averages. For example, if there are six reporting transit systems for a specific mode and fleet size category, the indicator "annual vehicle revenue hours per vehicle operated in maximum service" is computed by summing the annual vehicle revenue hours for these six systems,summing their vehicles operated in maximum service, and dividing the sum of vehicle revenue hours by the sum of vehicle operated in maximum service.

Such indicators can provide "typical" measures useful for general comparative purposes, i.e., comparison of these statistics against the comparable statistics for a specific transit system can help determine potential areas for improvements. The performance indicators include directly operated or large contractor services filing complete Section 15 reports. They do not include financial or operating data associated with purchased

transportation services for contracts using less than 50 vehicles. For example, measures using "Total Operating Expenses" include only those costs and units of service attributable to directly operated transit service. Costs reported for purchased transportation services have been subtracted from total operating costs.

Aggregate transit performance measures are contained in the following table.

2.15 Transit Performance Indicators.

This table includes performance measures for seven modes. The data were derived using the 300-series expense forms, operating data Forms 402, 403, 404, 405, 406, and 407, and Form 003 for vehicle count data. Annual reports prior to 1985 also used vehicle count data from Forms 406 and 407. These data have been replaced by Form 003 data in the 1985 through 1989 annual reports for improved consistency and clarity. See Section 1.3 of Chapter 1 for further details on the vehicle data.

Users of Table 2.15 should also note that a transit system's data are used in a performance indicator if it has no data (e.g., the transit system received a waiver from UMTA for reporting the particular data item) for one of the data items but does have data for the other item used in the indicator. This can lead to a distortion of the indicator, especially if there are not many transit systems in the particular modal fleet category. This does not occur often and UMTA is working on improving the computer operations for producing this table to correct this problem.

CHAPTER 3

INDIVIDUAL TRANSIT SYSTEM STATISTICS

CHAPTER 3

INDIVIDUAL TRANSIT SYSTEM STATISTICS

This chapter contains statistical tables summarizing financial and operating characteristics of 498 individual transit systems. Additional data on the individual systems, including additional required-level data as well as voluntary-level data, are available from the Section 15 public use tape. (See Chapter 1, Section 1.7.)

Within each table, transit systems are grouped in categories determined by the total number of vehicles operated in maximum service used for all of the transit systems' modes and for both directly operated as well as purchased transportation services. For example, a transit system with a multi-modal fleet of 300 directly operated motorbuses, 150 directly operated trolleybuses, and 100 demand response vehicles operated by contract carriers (550 total vehicles) would be listed in all tables in the "500-999" vehicle category. Transit systems are grouped in the following categories in this report:

- 1,000 and over vehicles operated in maximum service;
- 500-999 vehicles operated in maximum service;
- 250-499 vehicles operated in maximum service;
- 100-249 vehicles operated in maximum service;
- 50-99 vehicles operated in maximum service;
- 25-49 vehicles operated in maximum service;
- under 25 vehicles operated in maximum service.

Within these fleet size categories, transit systems are listed alphabetically by state and then numerically by Section 15 identification number.

Note that a transit system's total number of vehicles in a data column may not agree with the transit system's fleet category in tables providing directly operated data only. For instance, in the above example the transit system directly operates 450 vehicles. The transit system will still be included in the 500-999 category but will have only 450 vehicles presented in the directly operated services tables (e.g., Tables 3.11, 3.12, 3.18.1, etc.).

The first column of each table contains the four-digit Section 15 identification number assigned to each reporting transit system. The second column lists alphabetically the state code designating the primary location of the transit system. The transit system name is contained in the third column. In those cases where the transit system name or acronym does not identify the primary operating city of the reporter, the name of the city has been added in front of the transit system name. Other transit system identification, including the urbanized area (UZA) code and population as enumerated by the 1980 U.S. Decennial Census, and the name and telephone number of the primary Section 15 contact person, are contained in Appendix A.

Several Section 15 reporters provide data for transportation services in more than one UZA. For Section 15 reporting purposes, each transit system has been assigned to a single UZA, generally to that UZA receiving the majority of transportation services. (For Section 9 apportionment purposes, relevant data were disaggregated into the various component urbanized areas.)

In cases of a missing entry for a particular data item, the transit system will be included in the appropriate table(s), but with *NR* in the appropriate field(s). Missing data generally can be distinguished from true reported zeroes by examining the context in which data are found. If there are any instances where a more definitive distinction is desired, this can be obtained from the public use tape, which distinguishes between blanks and zeroes.

Zeros were entered in a few situations when data was extremely different from normal validation ranges for a particular data element and the reporter failed to respond to inquiries. For these situations, it could not be determined that data reported was in accordance with standard definitions.

QUESTIONABLE DATA

In the 1984 through 1987 annual reports, data whose validity and reliability are questionable were not entered into the Section 15 data base. Beginning with the 1988 report, the value of the data is included in the data base followed by a "Q" for questionable data. The data affected were those where the transit system failed to satisfactorily respond to questions raised during the validation process and/or did not collect the data in accordance with required (UMTA) definitions and requirements. A data item is considered by UMTA to be questionable when one or more of the following circumstances existed:

1. The transit system did not provide the complete cost of purchased transportation.
2. The transit system did not provide the required breakdown of the miles reported as motorbus directional route miles.
3. The Section 9 data certification by the independent auditor stated that the data were not collected in accordance with UMTA's definitions and requirements.
4. The transit system did not provide sufficient information to validate the data.
5. The transit system reported the same data for 1988 and 1989.

In addition, the Annual Report identifies each transit system that is privately owned in order to clearly distinguish between public and private transit systems. This distinction is based on the reporting transit systems' Form 001 of their Section 15 report where they indicated their type of organization. Where reporters indicated "other" organization on Form 001, their descriptions provided of themselves on Form 005 were used. A "P" following a transit system's Section 15 identification number in the 1989 Annual Report tables indicates that the transit system is privately owned.

The data in this chapter have a broad range of applications. They are, however, subject to the limitations discussed in Chapters 1 and 2 relating to the need to examine underlying factors and consistency of the Section 15 data in a more detailed manner. Whereas the aggregate statistics in Chapter 2 permit transit systems to compare their performance with industry averages within specified fleet size categories, the statistics in Chapter 3 permit systems to perform these comparisons more selectively; e.g., by selecting those systems defined as being within the same "peer group" by virtue of climate, topography, demographic characteristics of the population served, or other factors.

CAUTION: There may be a tendency by some analysts to overstate the significance of comparisons based strictly on the data contained in this report. Performance measures obtained using these data should be viewed strictly as tentative indicators of potential areas for improvement. If a specific indicator appears to imply below-average performance relative to industry peers (comparable transit systems), more detailed analysis is imperative in order to reveal the factors underlying the below-average value. These factors either may be improved by alteration or they may be beyond the control of management.

Chapter 3 presents a detailed description at one point in time of the performance of the 498 individual transit systems. The data also can be used for time-series analyses, because this is the eleventh annual report and most of these systems have reported for the earlier report years. Such analyses can contribute to conclusions on the current and evolving conditions and problems of specific systems as well as the transit industry as a whole. Time-series analyses, however, must consider that beginning with the 1983 report, Section 15 annual reports are being published based on transit systems' fiscal years ending during the calendar year instead of a July 1 to June 30 period (see Section 1.3 in Chapter 1 for additional details).

The tables in Chapter 3 are organized within the same four major groupings used in Chapter 2. The groupings are:

- transit revenues;
- transit expenses;
- non-financial operating data; and
- performance indicators.

3.1 SPECIAL NOTES ON THE DISAGGREGATE DATA TABLES

Several issues pertaining to the Section 15 reporting system and the 1989 Annual Report are summarized in Section 1.3 of the Introduction (Chapter 1). Users of Chapter 3 tables should refer to this section for a better understanding of the data, particularly the discussions of purchased transportation, public and private transit systems identification, vehicles operated in maximum service, and questionable data items. To avoid confusion, especially when performing comparative analyses using previously published reports, users should refer to these sections as well as to the discussions of individual tables below.

3.2 TRANSIT REVENUES

Tables 3.01 through 3.06 contain information on the types and sources of revenues for individual transit systems. Section 15 only requires revenues to be reported by transit system totals, not by individual modes.

Transit revenue data are presented in the following tables:

3.01 Sources of Transit Revenue and Public Assistance.

Data were compiled from Section 15 Reporting Form 201, "Revenue Summary Schedule," Form 202, "Revenue Detail Schedule," and Form 203, "Revenue Subsidiary Schedule-Sources of Public Assistance." Transit reporters submitting required-level reports complete Form 201, while voluntary-level reporters complete Form 202. All transit systems submit Form 203. The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

The column headed "Transportation Revenue: Other" combines various revenue object classes, including 402 (Special Transit Fares), 403 (School Bus Service Revenues), 404 (Freight Tariffs), 405 (Charter Service Revenues), and 406 (Auxiliary Transportation Revenues). This should be distinguished from the "Other" in the tenth column, which is from object class 440 (Subsidy from Other Sectors of Operations). These subsidies may include those received from utility rates and from bridge and tunnel tolls. The "Federal-Other" Sources of Public Assistance (column 12) includes such sources as Section 8 Planning and Technical Studies, Section 10 Managerial Training, and Section 18 Rural Assistance Program.

Note that the aggregate statistics in Chapter 2, Tables 2.02.1 and 2.02.2, may be higher than each of the computed totals for Federal, State, and local sources of public assistance in Table 3.01. This is because Table 3.01 includes data from transit systems only if both Forms 201/202 and 203 are submitted by the transit system. Tables 2.02.1 and 2.02.2 use Form 203 only. If a transit system completed Form 203 but not Form 201/202, its data are included in Table 2.02.1/2.02.2 but not in Table 3.01.

3.02/3.03 State Taxes Dedicated at Their Source for Transit Operations and Local Taxes Dedicated at Their Source for Transit Operations.

Tables 3.02 and 3.03, having identical formats, were compiled from Form 203, and present State and local revenues, respectively. Revenue from dedicated taxes are disaggregated by type of tax (income, sales, property, or other).

Table 3.02 and 3.03-"Other Taxes" include any other special State or local taxes dedicated at their source to transit such as motor vehicle excise tax and gross receipts tax.

The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

3.04 Sources of Public Capital Assistance for Transit.

Data were compiled from Form 103, "Capital Subsidiary Schedule-Sources of Public Capital Assistance."

Federal sources of assistance are classified either as funds provided under Sections 3, 5, or 9 of the 1964 UMT Act, as amended, or from other sources. State and local sources are divided into "General Revenue" and "Dedicated." Dedicated sources restrict funds to transportation-related expenditures, while transit must compete with other public programs for general revenues. Dedicated sources of funds are disaggregated into "Taxes" (income, sales, etc.), "Tolls" (bridges, tunnels, etc.), or "Other" (State and local bonds, investment income, etc.).

The number for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

3.05/3.06 State Taxes Dedicated at Their Source for Transit Capital and Local Taxes Dedicated at Their Source for Transit Capital.

Tables 3.05 and 3.06 also were compiled from Form 103. These two tables further disaggregate the State and local tax revenue for public transit that was shown in Table 3.04. The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

POTENTIAL DATA APPLICATIONS

These tables summarize the magnitude and source of transit revenues for individual transit systems. The data in these tables permit analyses of the extent to which specific systems recover operating expenses from fares, and the extent to which they rely on various types of local, State, and/or Federal assistance.

Transit systems can use these data to compare the sources and percentage distributions of their revenue to those of other systems. In general, the data permit cross-sectional and time-series analyses similar to those permitted by the comparable aggregate data in Chapter 2, except that the data in Chapter 3 permit analysts to examine individual systems and to custom define "peer groups." For example, peer groups could be formed based on mode, fleet size, annual operating expenses, or other factors not contained in this report, such as climate and collective bargaining agreements. Comparisons can be made to the individual transit systems in the group, or to overall group averages.

3.3 TRANSIT EXPENSES

Tables 3.07 through 3.10 contain information on the types and amounts of expenses incurred by individual transit systems reporting under Section 15. In Section 15 reports, transit expenses are reported (1) by "functions and (2) by "object classes."

EXPENSES BY FUNCTION

Functional classes divide operating expenses into four major categories:

- (VO) Vehicle Operations;
- (VM) Vehicle Maintenance;
- (NM) Non-vehicle Maintenance; and
- (GA) General Administration.

Further functional breakdowns are provided by transit systems reporting at voluntary levels A, B, or C. This detail is not contained in this report, but is available on the Section 15 public use tape. (See Chapter 1, Section 1.7.)

As discussed in detail in Chapter 2, analysis of expenses by function must be qualified by the degree to which transit systems uniformly allocate expenses among the various functional categories. This analysis should include careful consideration of Section 15 reporting limitations as well as detailed accounting practices at the specific transit systems being examined.

EXPENSES BY OBJECT CLASS

Object classes divide operating expenses into such categories as labor, fringe benefits, services, or materials and supplies. More detailed object class breakdowns are provided by the voluntary-level reports, and are available on the Section 15 public use tape. (See Chapter 1, Section 1.7.)

Whereas revenue data were summarized for all modes operated by a transit system, the expense data are disaggregated by mode. For each of the various functional categories, multi-modal transit systems must allocate "joint expenses" to the appropriate modes.

Beginning with the 1987 report, the definition of transit fare revenues was clarified to only include fare revenues for directly operated service on the revenue summary schedule and the revenue detail schedule. Fare revenues from purchased service are not reported on the revenue schedules. Consequently, there may be a decrease in the transit fare revenues reported for some agencies.

Under Section 15, expenses for multi-modal transit systems are allocated to the individual modes by major function, but not by object class. Consequently, modal totals for object classes such as operators' salaries and wages or utilities exclude joint expenses. The "Joint Expenses" entries in Table 3.09 provide data by object class on those operating expenditures of multi-modal systems which cannot be assigned directly to a particular mode. Because use of joint expense categories varies among transit systems, this could affect comparisons using object class totals (e.g., operators' salaries and wages per vehicle revenue mile).

RECONCILING EXPENSES

The operating expenses summarized in these tables exclude "reconciling items" (e.g., interest expenses, leases and rentals, and depreciation). Under Section 15, reconciling items are reported only as system totals, and are not disaggregated by mode or functional class. Reconciling items are required to provide an overall total which is consistent with locally published reports. These expenses are reported separately under Section 15 because local accounting practices for handling such items (particularly depreciation and amortization) differ widely. Generally, analysts using Section 15 data exclude reconciling items from operating expenses. Although this actually understates true operating costs, it resolves the problems inherent in inconsistent treatment of reconciling items. "Operating expenses" used in the "incentive tier" of the Section 9 allocation formula also exclude reconciling items.

Transit expense data for individual transit systems are summarized in the following tables.

3.07 Transit Operating Expenses by Mode and Function.

Data were compiled from a variety of expense report forms: 301 and 310 (R-level); 311 (A-level); 312 (B-level); 313 (C-level), and 315 (A-, B-, and C-levels). Data are listed by mode, and joint expenses are allocated to appropriate modes.

Since purchased transportation expenses may distort the financial data associated with service directly operated by a transit system, object classes 508.01 and 508.02 have been subtracted and presented in separate columns. Beginning with the 1987 report, transit agencies were instructed to include fares retained by the contractor when reporting purchased transportation expenses (object class codes 508.01/508.02) to obtain a more accurate picture of the total cost of purchased transportation. In some instances the inclusion of retained fares overstates the cost of purchased transportation. However, it is generally thought that the inclusion of retained fares brings the purchased transportation costs closer to the true cost of the service.

The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

3.08 Transit Operating Expenses by Mode and Object Class.

Data were compiled from the same forms used for Table 3.07. The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

Object class categories correspond to those reported on Form 301:

501.01 -- operators' salaries and wages;
501.02 -- other salaries and wages;
502 -- fringe benefits;
503 -- services;
504.01 -- fuel and lubricants;
504.02 -- tires and tubes;
504.99 -- other materials and supplies;
505 -- utilities;
506 -- casualty and liability costs;
508.01 -- purchased transportation (less than 50 revenue vehicles);
508.02 -- purchased transportation (50 or more revenue vehicles);

In addition, 507-taxes, 509- miscellaneous expense, and 510-expense transfers are included as "other."

Although data are listed by mode, Section 15 reporting does not allow joint expenses to be allocated to object classes. Note that for a multi-mode system, the "total expenses" for a particular mode will be lower in Table 3.08 than in Table 3.07. This is because the "joint expenses" have been allocated to modes in Table 3.07, while these expenses can only be reported separately in Table 3.08.

Note: Beginning with the 1984 Annual Report, there is an additional column in Table 3.08 with the heading "JE" for Joint Expenses. Several multi-mode reporters in Table 3.08 have a JE in this column as well as a corresponding expense line in the table for these joint expenses. Joint expenses are those operating expenses of multi-mode agencies which cannot be allocated by object class to a specific mode and are therefore classified as a shared system expense. Further explanation about joint expenses is provided in the above section on expenses by object class.

3.09 Single Mode Motor Bus Transit Systems, Operating Expenses by Function and Object Class.

This table is included because 29 percent of Section 15 reporters operate only motorbus services. Data are cross-classified by major functional and object classes.

Object classes are the same as those in Table 3.08. The function codes used in the table represent the four major functional categories:

- (VO) Vehicle Operations;
- (VM) Vehicle Maintenance;
- (NM) Non-vehicle Maintenance; and

- (GA) General Administration.

  The numbers for total motorbuses operated in maximum service include those motorbuses used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

3.10 Employer and Employee Paid Fringe Benefits.

  Data were derived from Form 331, "Fringe Benefits Subsidiary Schedule." This Form is not required for transit systems with 25 or fewer vehicles operated in maximum service in any mode. The information presented represents system totals, because fringe benefit payments are not reported by mode. The numbers for vehicles operated in maximum service include those vehicles used for both directly operated services and for purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

POTENTIAL DATA APPLICATIONS

The expense tables summarize the costs of operating individual transit systems. Data are disaggregated by mode and by function and object classes. These data can be used to compare costs among various transit systems, and to determine potential areas for improvements. As discussed in Chapters 1 and 2, such analysis should incorporate careful examination of all causal factors underlying these differences. This examination can require information beyond that which is obtainable from Section 15.

3.4 NON-FINANCIAL OPERATING DATA

Tables 3.11 through 3.17 contain non-financial operating data for individual transit systems. Efforts have been made to separate directly operated data from purchased transportation statistics. Each table heading indicates whether the data contained in the table are for directly operated data and/or purchased transportation services.

TRANSIT MAINTENANCE AND SAFETY

Table 3.11 summarizes numbers of roadcalls and other maintenance-related statistics. Table 3.15 presents accident data for individual transit systems. Use of data from these tables for analyses generally requires additional data, such as vehicle miles and age of fleet.

In addition, because the interpretation of what constitutes a roadcall or an accident has not been uniform, these data may not be entirely consistent among transit systems. Thus, roadcall figures should be viewed as gross indicators with some utility for time-series analyses. Analysis of roadcalls as measures of maintenance performance should be undertaken with caution, and requires detailed examinations of how roadcalls were defined and the individual systems' policies for taking vehicles out of service. UMTA is working to improve Section 15 definitions of accidents and roadcalls.

Instructions concerning the reporting of roadcalls for mechanical failures were further clarified beginning with the 1987 report. Failures that do not in itself prevent a vehicle from running (e.g., air conditioning failure, wheel chair lift failure, etc.) should not be reported as mechanical failures, even if local policy prohibits a vehicle from running with such failures.

TRANSIT WAY MILEAGE

Directional route miles are reported on Form 403 and presented in Table 3.13. The term "directional route miles" is defined as the mileage service operates in each direction over routes which public transportation vehicles travel while in revenue service. Directional route miles are a measure of the facility or roadway, not the service carried on the facility, i.e., number of routes or vehicle revenue miles. They are determined by direction of service, but not by the number of traffic lanes or rail tracks existing in a given right-of-way. If vehicles travel in only one direction within a right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice. A mile of single track over which streetcars operate in both directions represents two directional route miles. And a mile of exclusive busway on which a transit company operates six different routes in only a single direction represents one directional mile, regardless of the number of lanes.

SERVICE SUPPLIED AND SERVICE CONSUMED DATA

"Service supplied" data include vehicle miles, vehicle revenue miles, vehicle hours, and vehicle revenue hours. Beginning in 1984 reporters were asked to indicate both their scheduled and actual vehicle revenue miles of service. The purpose of adding scheduled vehicle revenue miles of service is to allow a reporter to indicate whether it may have more or less service than had been originally scheduled. The difference between vehicle miles and vehicle revenue miles represents deadheading. Definitions of the above data terms can be found in Volume II of the Uniform System of Accounts and Records and Reporting System and in UMTA Circular 9030.1A.

"Service consumed" data refer to ridership information (measures of use of the service supplied), and include unlinked passenger trips and passenger miles. Because passenger mile data are not normally collected by transit systems as a routine part of their operations, they are among the most difficult to collect. In most instances, they are collected using sampling techniques. While UMTA has suggested several such techniques, transit systems may use any sampling techniques which satisfy precision and confidence requirements of 10 percent and 95 percent, respectively.

Service supplied and service consumed data are reported on Forms 406 (for non-rail modes) and 407 (for rail modes), and are reported in terms of average weekday, average Saturday, and average Sunday. Beginning with the 1984 report year provision was made on Forms 406 and 407 for reporting of annual totals, and the accounting for all days operated. From 1979-1982, the annual totals for service provided and consumed were estimated by assuming the operation of 253 weekday schedules, 53 Saturday schedules, and 59 Sunday and holiday schedules. In the 1983 report, agencies had the option of either reporting their actual annual data or of UMTA using the above estimates.

The non-financial operating data are provided in the following tables. For multi-modal systems, data are disaggregated by individual modes.

3.11 Revenue Vehicle Maintenance Performance.

Data were compiled from Form 402, "Revenue Vehicle Maintenance Performance and Energy Consumption Schedule." The numbers for vehicles operated in maximum service are for those vehicles used for directly operated services only as reported on Form 003. For explanation of maintenance, see above section on transit maintenance and safety.

3.12 Energy Consumption.

Data for this table also were compiled from Form 402. The numbers for vehicles operated in maximum service are for those vehicles used for directly operated services only as reported on Form 003.

3.13 Transit Way Mileage.

Data were compiled from Form 403, "Transit Way Mileage Schedule." The numbers for vehicles operated in maximum service are for those vehicles used for directly operated services only as reported on Form 003. For explanation of directional route miles, see above section on transit way mileage. Also, note that the format of this table changed beginning with the 1984 Annual Report from previous annual reports in order to separate rail and non-rail modes.

3.14 Transit System Employee Count.

Data were compiled from Form 404, "Transit System Employee Equivalent Schedule." The numbers for vehicles operated in maximum service are for those vehicles used for directly operated services only as reported on Form 003.

Fractional entries result from the fact that number of employees are expressed in terms of "employee equivalents" for the year to the nearest one-tenth employee. One employee equivalent is defined as 2,080 labor hours. To the extent that an employee works on capital projects, his or her labor is considered a capital expense; otherwise it is an operating expense.

Form 404 was revised beginning with 1985 Section 15 reporting. The revisions eliminated the major distinction between managerial and support (clerical) employees and eliminated the breakdown of capital labor employee equivalents. Table 3.14 was revised beginning with the 1985 Annual Report to reflect these revisions.

3.15 Transit Accidents.

Data were compiled from Form 405, "Transit System Accidents Schedule." The numbers for vehicles operated in maximum service are for those vehicles used for directly operated services only as reported on Form 003. For explanation of accidents, see above section on transit maintenance and safety.

3.16 Transit Operating Statistics: Service Supplied and Service Consumed.

This table summarizes transit service supplied and consumed data. These service supplied and service consumed data were compiled from Forms 406 and 407, "Transit System Service Supplied, Service Consumed, Service Personnel & Service Operated Schedule," for non-rail modes and rail modes, respectively.

The numbers for vehicles operated in maximum service in the 1985 through 1989 annual reports are derived from Forms 003 (directly operated service) and 004 (purchased transportation service) instead of Forms 406 and 407 used in previous annual reports. In addition, Table 3.16 of the 1985 through 1989 annual reports includes a column for vehicles available for maximum service, as reported on Forms 003 and 004. This column replaces the trains operated in average weekday maximum service data in previous reports. The vehicles available for maximum service represent the total active service fleet and include spares, out of service vehicles, and vehicles in or awaiting maintenance. They do not include vehicles being held for sale, emergency contingency use, etc. If the total active fleet for a given mode varies during the year, the reported figure represents the same time period as that used to report vehicles operated in maximum service. Thus, the difference between vehicles available for maximum service and vehicles operated in maximum service can be used to compute a transit system's spare ratio. See Section 1.3 of Chapter 1 for further details on the vehicle data.

Two changes were made to Table 3.16 beginning with the 1984 Annual Report. First, a column for annual schedule vehicle revenue miles was added in order to indicate whether a transit system had more or less service than had been originally scheduled. Second, the column order was shifted in order to place side-by-side all columns for vehicle miles and all columns for vehicle hours.

3.17 Age Distribution of Revenue Vehicle Inventory.

Data were compiled from Form 408, "Revenue Vehicle Inventory Schedule," for directly operated services only. Data are shown by vehicle type and age of vehicles in the total active fleets. The vehicle type codes are listed in Section 1.3 of Chapter 1. The age of a vehicle refers to the number of years since its date of manufacture. The use of "total active fleet" in this table represents a change from previous annual reports prior to 1984 which used "total fleet size" data.

POTENTIAL DATA APPLICATIONS

The data presented in Tables 3.11 through 3.17 can be used to help answer questions regarding service provided by individual transit systems relative to the investment required. For example, how many employees, how much fuel, and how many vehicles were required to provide that service; how safe was that service; and how much use was made of the service by transit patrons.

3.5 PERFORMANCE INDICATORS

Tables 3.18.1 through 3.18.4 contain selected performance indicators for individual transit systems. These indicators are not reported directly, but are computed from other reported data. Usually, these relate measures of service outputs to measures of resource inputs (e.g., vehicle revenue miles per vehicles operated in maximum service, or passenger miles per vehicle revenue hour). Performance measures are computed separately for each mode, and therefore utilize only data items reported on a modal basis (revenues and reconciling expenses are excluded).

Many additional performance indicators can be computed from Section 15 data and other sources. Again, analysts should note the limitations relating to interpretation and use of any performance indicators, relating primarily to the need to examine underlying or casual factors in greater detail.

There is particularly great potential for distortion if only one or two indicators are viewed in isolation. For example, the single measure "operating expense per unlinked passenger trip" might be very misleading for a system with a disproportionately high number of transfers (caused, for example, by geographical or routing constraints). In general, care should be taken to examine a balanced set of indicators for use in evaluation.

3.18.1/3.18.4 Transit Performance Indicators.

The data were derived using the 300-series expense forms, operating data Forms 402, 403, 404, 405, 406, and 407, and Form 003 (directly operated service) for all but two (see below) of the vehicle count data. Annual reports prior to 1985 also used vehicle count data from Forms 406 and 407. These data with two exceptions were replaced by Form 003 data in the 1985 through 1989 annual reports for improved consistency and clarity. The two exceptions are for maximum number of vehicles operated in average PM peak period and maximum number of vehicles operated in average base period. These data items are only reported on Forms 406 and 407.

Beginning with the 1984 report, two data columns were switched between Tables 3.18.3 and 3.18.4 to improve the logical grouping and usefulness of data columns in these tables. The last two columns of Table 3.18.3 that pertain to transit employee ratios were moved to Table 3.18.4 which primarily dealt with employee ratios. Correspondingly, the last three columns of Table 3.18.4 that deal with maintenance and fuel performance ratios were moved to Table 3.18.3 which consists primarily of vehicle related performance ratios.

TABLE 3.01 as of 11/16/90

*Includes expenses for contracts with public agencies and/or private carriers.

**Joint Expenses (JE) are those operating expenses of multi-mode agencies which cannot be allocated by object class.

Total operating expenses for each mode excludes any joint expenses. For further information, refer to Chapter 3 introduction.

#The numbers for vehicles operated in maximum service are for those used for both directly operated services and purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

P following the Reporter ID indicates a private carrier.

*Includes expenses for contracts with public agencies and/or private carriers.

**Joint Expenses (JE) are those operating expenses of multi-mode agencies which cannot be allocated by object class.

Total operating expenses for each mode excludes any joint expenses. For further information, refer to Chapter 3 introduction.

#The numbers for vehicles operated in maximum service are for those used for both directly operated services and purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

P following the Reporter ID indicates a private carrier.

*Includes expenses for contracts with public agencies and/or private carriers.

**Joint Expenses (JE) are those operating expenses of multi-mode agencies which cannot be allocated by object class.

Total operating expenses for each mode excludes any joint expenses. For further information, refer to Chapter 3 introduction.

#The numbers for vehicles operated in maximum service are for those used for both directly operated services and purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

P following the Reporter ID indicates a private carrier.

*Includes expenses for contracts with public agencies and/or private carriers.

**Joint Expenses (JE) are those operating expenses of multi-mode agencies which cannot be allocated by object class.

Total operating expenses for each mode excludes any joint expenses. For further information, refer to Chapter 3 introduction.

#The numbers for vehicles operated in maximum service are for those used for both directly operated services and purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

P following the Reporter ID indicates a private carrier.

"NR" indicates data not reported by agency.

*Includes expenses for contracts with public agencies and/or private carriers.

**Joint Expenses (JE) are those operating expenses of multi-mode agencies which cannot be allocated by object class.

Total operating expenses for each mode excludes any joint expenses. For further information, refer to Chapter 3 introduction.

#The numbers for vehicles operated in maximum service are for those used for both directly operated services and purchased transportation services operating less than 50 vehicles as reported on Forms 003 and 004.

P following the Reporter ID indicates a private carrier.

"NR" indicates data not reported by agency.

APPENDIX D

GLOSSARY

APPENDIX D

GLOSSARY

Accident - Incidents in which there is property damage, personal injury, or fatality involving revenue or non-revenue transit vehicles or stations. Accidents are classified as "collision," "non-collision," or "station."

Aerial Tramway Transit (TR) - This mode consists of one or more vehicles which are suspended and propelled by cable and run between two terminals.

Automated Guideway (AG) - This mode consists of one or more automatically controlled vehicles operating over an exclusive guideway.

Cable Car (CC) - A streetcar type of vehicle which is propelled by means of an attachment to a moving cable buried in a street right-of-way.

Carriers Under Contract - See "purchased transportation."

Charter Miles - The total miles traveled by a revenue vehicle while in charter service. They include miles traveled while carrying passengers, plus associated deadhead miles.

Commuter Rail (CR) - Typically characterized as urban passenger train service for local short distance travel between a central city and adjacent suburbs. It does not include rail rapid transit or light rail/streetcar service. Service of a predominantly intercity nature is excluded, except where a local portion of it is operated under contract to a public agency for commuter purposes.

Controlled Access Right-of-Way (ROW) - For Section 15/Section 9 purposes, a roadway or other right-of-way is categorized as controlled if it is used during a portion of the day exclusively by transit and/or other high occupancy vehicles (HOV's). (If used in this manner at all times, it is categorized as an exclusive right-of-way).

Deadhead Mileage - Miles traveled by revenue vehicles when not in revenue service. Includes miles traveled to and from storage facilities and other non-revenue service mileage.

Demand Responsive Service (DR) - Personal transit service operated on roadways, providing service on demand. Vehicles are normally dispatched, and used exclusively for this service.

Density - Population per square mile.

Directional Miles - Same as "directional route miles."

Directional Route Miles - Synonymous with "miles of directional roadway," "route miles," "line miles," and "directional miles." The mileage service operates in each direction over routes which public transportation vehicles travel while in revenue service. Directional route miles are a measure of the facility or roadway, not the service carried on the facility, i.e., number of routes or vehicle revenue miles. They are determined by direction of service, but not by the number of traffic lanes or rail tracks existing in the right-of-way. If vehicles travel in only one direction within the right-of-way, each mile is counted once. If vehicles travel in both directions, each mile is counted twice.

Employee Equivalent - One employee equivalent equals 2080 labor-hours of work.

Exclusive Right-of-Way - A roadway or other right-of-way reserved at all times for transit and/or other high-occupancy vehicles. (If reserved in this manner for only a portion of the day, it is categorized as a controlled access right-of-way.)

Expense Transfer - Accounts used for reporting adjustments and reclassifications of expenses previously reported.

Ferryboat (FB) - Vessel for carrying passengers and/or vehicles over a body of water. The vessels generally are steam or diesel powered conventional ferry vessels. They also may be hovercraft, hydrofoils, and other high-speed vehicles.

FICA or Railroad Retirement - Required payments or accruals to the Federal social security or railroad retirement fund made by employees and by employers on behalf of their employees.

Fixed Guideway Mode - Any public mass transportation service which partially or exclusively uses exclusive or controlled rights-of-way or rails. For Section 9 purposes, this also includes ferryboat and fixed catenary systems (e.g., trolleybus) which can share a right-of-way with other modes, and that portion of motorbus service operated on exclusive or controlled rights-of-way.

Fringe Benefits - Payments or accruals to others (insurance companies, governments, etc.) on behalf of an employee, and direct payments or accruals to an employee arising from something other than his or her performance of a piece of work.

Function Class - As used for Section 15 purposes, an activity, area, or cost center of a transit system which incurs expenses. The four major function classes are: vehicle operations, vehicle maintenance, non-vehicle maintenance, and general administration. Function class and object class are the two dimensions in which expenses are classified.

General Administration Expenses - All costs not associated with vehicle operations, vehicle maintenance, and non-vehicle maintenance. Typically may include such expenses as administrative wages and fringe benefits, advertising, outside professional fees, office supplies, telephone and utilities, general insurance premiums, dues, subscriptions, and travel.

Heavy Rail - Same as "rail rapid transit."

Inclined Plane Railway (IP) - A special tramway type of vehicle modified to run on rails so that its passenger seats remain horizontal while its undercarriage is angled parallel to the slope.

Jitney (JT) - Passenger cars or vans (6 to 15 seat vehicles) which operate on relatively fixed routes (sometimes with minor deviations), without fixed schedules or fixed stops. Jitneys are often privately owned and operated.

Joint Expenses (JE) - Operating expenses that cannot be assigned directly to a specific mode in a multi-mode system. These expenses are distributed among modes using capacity-miles or another logical basis of assignment. Joint expenses are allocated to modes by "function" categories, but not by "object class" categories.

Light Maintenance Facilities - Facilities used for inspecting and servicing revenue vehicles and for performing light maintenance work on those vehicles. Light maintenance includes brake adjustments, engine degreasing, tire work, minor body repairs, painting, etc.

Light Rail Transit (LR) - See "streetcar."

Line Miles - Same as "directional route miles."

Miles of Directional Roadway - Same as "directional route miles."

Mixed Traffic Right-of-Way - Roadway shared by transit vehicles and private automobiles. Includes all roadways used by motorbuses, except those categorized as "exclusive" or "controlled access" rights-of-way.

Motorbus (MB) - Passenger vehicles, equipped with rubber tires, operated on roadways. Class A motorbuses are equipped with more than 35 seats, Class B with 25 to 35 seats, and Class C with less than 25 seats. In this Section 15 report, "motorbus" service implies fixed routes and schedules.

Non-Vehicle Maintenance Expenses - Costs associated with the inspection, maintenance, and repair of assets other than vehicles (buildings, radio equipment, shop equipment, etc.). Includes costs for maintenance wages and fringe benefits, maintenance supplies, repair materials, "outside" maintenance and repair work.

Object Class - As used for Section 15 purposes, one of two dimensions in which expenses are classified. Refers to the type of expense (wages, fringe benefits, insurance, fuel, etc.). The other dimension in which expenses are classified is "function class."

Operating Expenses - All expenses associated with operation of an individual mode by a given operator. At the Section 15 required reporting level, total operating expenses is derived from line 15 of Form 301 for a single mode system, and from line 15 of Form 310 for a multi-mode system. Operating expenses include distribution of "joint expenses" to individual modes, and exclude "reconciling items" such as interest expenses and depreciation. Do not confuse with "vehicle operations expense."

Passenger Mile - A measure of service utilization, equal to one passenger traveling in a vehicle for one mile. (For example, ten passengers riding in a vehicle for two miles equals 20 passenger miles.)

Performance Indicator - Statistical representation of how well an activity, task, or function is being performed. Usually computed by relating a measure of service output or utilization to a measure of service input or cost.

Purchased Transportation - Transportation service purchased by a public agency from a public or private transportation provider based on a written contract. The provider is obligated to operate public transportation service for the public agency for a specific monetary consideration.

Rail Rapid Transit (RR) - Transit service using rail cars with motive capability, driven by electric power usually drawn from a third rail, configured for passenger traffic and usually operated on exclusive rights-of-way. Utilizes generally longer trains and consists of longer station spacing than light rail.

Reconciling Items - Expense object classes including interest, leases and rentals, and depreciation. Reported separately in Section 15 because of differences in local accounting practices. For consistency, "operating expenses" in published tables exclude reconciling items.

Revenue Capacity Miles (Computed) - Revenue vehicle-miles times the average passenger capacity of the active vehicles in the fleet. Average passenger capacity is determined by averaging the sum of the seated capacity and standing capacity of all active vehicles in the fleet.

Revenue Vehicles - The floating and rolling stock used in providing transit service for passengers. The term "revenue vehicles" includes the body and chassis and all fixtures and appliances inside or attached to the body or chassis, except fare collection equipment and revenue vehicle movement control equipment (radios).

Roadcall (for Mechanical Failure) - A revenue service interruption during the reporting period caused by failure of some mechanical element of the revenue vehicle. Mechanical failures include breakdowns of air equipment, electrical units, fuel systems, engine, steering and front axle, rear axle and suspension, and torque converters. These interruptions require assistance from someone other than the operator or crew to restore the vehicle to an operating condition. A failure that does not in itself prevent a vehicle from running (e.g. air conditioning failure, wheel chair lift failure, etc.), is not a mechanical failure even if local policy prohibits a vehicle from running with such failures. Tire and fare box failures are also not included in mechanical roadcalls.

Route Miles - Same as "Directional Route Miles"

School Buses - Type I and Type II school vehicles as defined in Highway Safety Program Standard No. 17, used exclusively to transport students, personnel, and equipment.

Streetcar (SC) - A mode of urban transportation utilizing predominantly reserved but not necessarily grade-separated rights-of-way. Utilizes electrically propelled rail vehicles, operated singularly or in trains.

Trolleybus (TB) - Passenger vehicles, drawing electrical power from overhead lines, equipped with tires, and operated on city streets.

Unlinked Passenger Trips - The number of passengers who board public transportation vehicles. Passengers are counted each time they board a vehicle, even though more than one vehicle may be used for a single journey from origin to destination.

Urbanized Areas (UZA) - An area designated by the Bureau of the Census containing a central city or cities and surrounding closely settled urban fringe (suburbs), which together have a population of 50,000 or more. Urbanized areas used in this report have been based on the 1980 Decennial Census.

Vanpool Service (VP) - Publicly sponsored commuter service operating under prearranged schedules for pre-formed groups of riders in vehicles with 8 to 18 seats. Drivers are also commuters and receive little or no compensation besides a free ride.

Vehicles Available for Maximum Service - The total active service fleet, including spares, out of service vehicles, and vehicles in or awaiting maintenance. They do not include vehicles being held for sale, emergency contingency use, etc. If the total active fleet for a given mode varies during the year, the reported figure represents the same time period as that used to report "vehicles operated in maximum services."

Vehicle Hours - The total hours of travel by revenue vehicles including hours consumed in passenger service and deadhead travel. For rail, vehicle refers to passenger car.

Vehicle Maintenance Expenses - Costs associated with the inspection, maintenance, and repair of vehicles, such as mechanics' wages and fringe benefits, maintenance supplies, repair parts, "outside" maintenance, and repair work.

Vehicle Miles - The total distance traveled by revenue vehicles, including both revenue miles and deadhead miles. For rail, vehicle refers to passenger car.

Vehicles Operated in Maximum Service - The number of revenue vehicles in service during a reporting transit system's maximum season of the year, on the week and day that this maximum occurs. The count of these vehicles is not taken on a day when a special event or extreme set of circumstances would cause the resulting tally to represent a "one time" event rather than a recurring maximum service requirement.

Vehicle Operations Expenses - The costs associated with operating vehicles, such as operators' wages and fringe benefits, fuel, tires, and vehicle licensing. Do not confuse with "operating expenses."

Vehicle Revenue Hours - Total number of hours that a vehicle is in revenue service. Excludes hours consumed while traveling to and from storage facilities and during other deadhead travel. For rail, vehicle refers to passenger car.

Vehicle Revenue Miles - Total miles traveled by revenue vehicles while in revenue service. Excludes miles traveled to and from storage facilities and other deadhead travel. For rail, vehicle refers to passenger car.
